RESTRICTION

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-15**, drawn to a method for indicating a position of a transfer press, classified in class 72, subclass 31.01.
- II. Claims 16-22**, drawn to a die check, classified in class 33, subclass 562.

The inventions are distinct, each from the other because:

Inventions I and II, respectively, are related as process and apparatus for its practice. The inventions are distinct if it can be shown that either: (1) the process as claimed can be practiced by another materially different apparatus or by hand, or (2) the apparatus as claimed can be used to practice another and materially different process. (MPEP § 806.05(e)). In this case, the method could be practiced without recourse to the claimed apparatus. For example, the transfer press rails and gripper implements could be activated during the operation of the press in a preliminary test mode while using the press rails and gripper elements as the “template” to adjust and coordinate the sequencing within the transfer press. Accordingly, a die check template would not be required during the method.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

Art Unit: 3725
